## Proficiency Test 6/23

### - TW O1 – pesticides with GC/MS and HPLC/UV in drinking water -

atrazin, desethylatrazine, metribuzin, tebuconazole, terbutylazine, bromacil,  
diuron, ethofumesate, flufenacet, hexazinone, isoproturon, metalaxyl,  
metamitron, methabenzthiazuron, dichlorbenzamide, desethylterbutylazin,  
metolachlor, Bisphenol A, Nonylphenol, Octylphenol

## Final report

provided by  
AQS Baden-Württemberg at  
Institute for Sanitary Engineering, Water Quality and Solid Waste Management,  
University of Stuttgart  
Bandtäle 2, 70569 Stuttgart-Büsnau, Germany

on behalf of the Ministry of Rural Affairs and  
Consumer Protection Baden-Württemberg

Stuttgart, in October 2023

## 1. General

This PT was provided in the context of the AQS Baden-Württemberg drinking water PT scheme. In this round atrazine, desethylatrazine, metribuzin, tebuconazole, terbutylazine, bromacil, diuron, ethofumesate, flufenacet, hexazinone, isoproturon, metalaxyl, metamitron, methabenzthiazuron, dichlorbenzamide, desethylterbutylazin, metolachlor, Bisphenol A, Nonylphenol and Octylphenol were to be determined.

The PT was executed according to the recommendations of the German Federal Environment Agency from December 2003. These recommendations “for the execution of PTs for the measurement of chemical parameter and indicator parameter for the external quality control of drinking water laboratories” (Bundesgesundheitsblatt 46 12, 1094-1095) require, that drinking water laboratories must demonstrate their competence for all parameters they are accredited for or they want to be accredited for by a successful participation in a PT round within a cycle of 2-3 years.

The PT was executed and evaluated according to the requirements of DIN 38402-A45 and ISO/TS 20612.

## 2. PT design

Each participant received the following samples:

- 3 samples for the determination of atrazine, desethylatrazine, metribuzin, tebuconazole, terbutylazine, bromacil, diuron, ethofumesate, flufenacet, hexazinone, isoproturon, metalaxyl, metamitron, methabenzthiazuron, dichlorbenzamide, desethylterbutylazin, metolachlor in 1000-ml-glass bottles with screw cap. 40 mg/l sodium azide were added to the samples.
- Alkylphenoles:  
3 sample for the determination of Bisphenol A, Octylphenol, Nonylphenol in 1000-ml-ground bottles (brown). Preservation of the samples by cooling.

9 different concentration levels/batches were produced. The concentration levels were randomly allocated to the participants. It was ensured that each participant received one concentration level from the lower concentration range (level 1–3).

## 3. Sample preparation

The samples for the determination of the pesticides were based on a real drinking water matrix. The samples for the determination of the pesticides contained ca. 0,2 mg/l acetonitrile as solvent. The samples for the determination of the alkylphenoles contained ca. 0,2 mg/l ethylacetate as solvent.

The drinking water was filtered by using 5 µm and 1 µm filter cartridges to eliminate particles. To reduce germs, the drinking water was pasteurised at 80°C in a stainless steel vessel overnight. During pasteurisation, the drinking water was aerated with a mixture composed of carbon dioxide and nitrogen to prevent calcium carbonate precipitation.

The drinking water was spiked with stock solutions and the concentrations covered drinking and ground water relevant ranges.

The samples were cooled directly after preparation and were dispatched with freezer packs.

#### 4. Sample distribution

The samples were dispatched on 19 June 2023 by express service “GoExpress”.

#### 5. Analytical methods

The participants were free to choose a suitable method, but a limit of quantification of 0,04 µg/l was required for all parameters with exception of Nonylphenol. For Nonylphenol a limit of quantification of 0,08 µg/l was required.

The participants were informed that the samples had to be analysed in the own laboratory, with own personal and own equipment. Subcontracting of the analysis was not allowed.

The samples had to be analysed in duplicate over the complete method (sample preparation and measurement). The participants were asked to report the results in µg/l with three significant digits.

#### 6. Submission of the results

The deadline for the submission of results was on 10 July 2023. No results were accepted after the deadline.

## 7. Basic principle of evaluation and assessment

The basic principle of the evaluation and assessment of the PTs from AQS Baden-Württemberg are described in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf).

This PT was evaluated as follows:

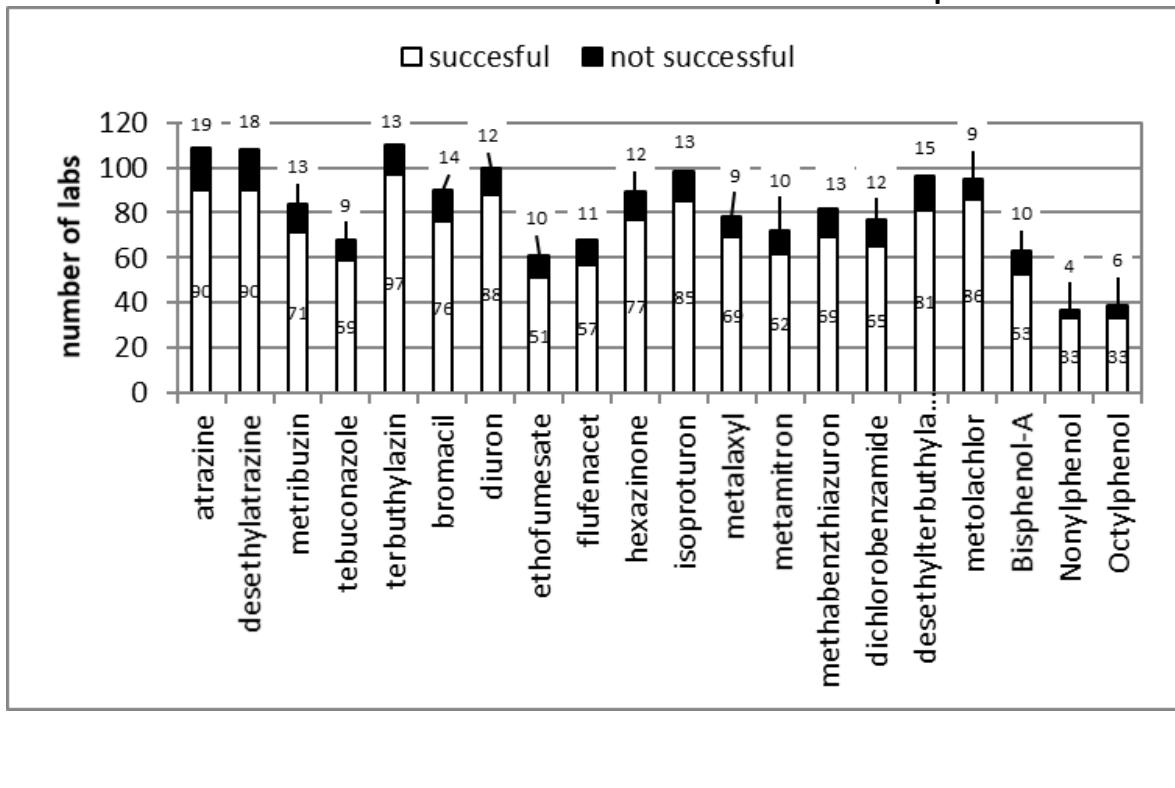

<b>Assigned value <math>x_{pt}</math>:</b>	<u>Reference value:</u> All pesticides, with exception of metolachlor*
	<u>Consensus value (Hampel estimator):</u> Alkylphenoles, metolachlor*
<b>Standard deviation for proficiency assessment <math>\sigma_{pt}</math>:</b>	Q method Variance function
<b>Upper limit of <math>\sigma_{pt}</math>:</b>	25 %
<b>Lower limit of <math>\sigma_{pt}</math>:</b>	5 %
<b>Assessment:</b>	$z_u$ -Score
<b>Classification of the single results:</b>	$ z_u  \leq 2,0$ successful $2,0 <  z_u  < 3,0$ questionable $ z_u  \geq 3,0$ unsatisfactory
<b>Parameter assessment:</b>	A parameter was assessed as successful, if more than half of the values were correctly determined (2 out of 3 values are within the tolerance limits).

\* On the background of the results submitted by the participants, doubts arose about the trueness of the metolachlor standard used to prepare the samples. Therefore, the reference values were not used as the assigned values and the consensus mean values were used instead.

## 8. Evaluation

<b>Number of participants:</b>	121 6 laboratories did not report any results
<b>Number of reported values</b>	4872
<b>Number of accepted values:</b>	4179 (85,8 %)

### Illustration of the successful and not successful laboratories for each parameter

## 9. Explanation for the appendices

The explanations for the appendices can be found in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf).

## 10. Measurement uncertainty

### General:

Number of labs with valid values	115
Number of labs with valid values and reported measurement uncertainties	67 (58,3 %)
Number of valid values	4872
Number of valid values with measurement uncertainties	2886 (59,2 %)

### **Measurement uncertainties against the accreditation status**

Accreditation status of the values	Number of values	Number of values with measurement uncertainty
accredited	4017	2535 (63,11 %)
not accredited	309	168 (54,37 %)
not specified	546	183 (33,52 %)

### **Interpretation of the reported measurement uncertainties:**

If measurement uncertainties are underestimated values assessed as “satisfactory” in the PT ( $|z_u| \leq 2$ ), will have a large  $\zeta$ -score.  $|\zeta| > 2$  means that the “own” requirements (defined in terms of estimated uncertainty) are not fulfilled.

<b>Number of values with reported measurement uncertainty having a <math> z_u  \leq 2,0</math></b>	2493
<b>Number of values with a magnitude of <math>\zeta</math>-scores <math>&gt; 2</math></b> The own requirements of the laboratory are not fulfilled and the estimation of the measurement uncertainty is too low	263 (10,5 %)

## **11. Traceable reference values**

The explanations about traceable reference values can be found in the document „Evaluation of the PTs and information for the report“, which can be downloaded from [www.aqsbw.de/pdf/ausw\\_berichte\\_v1\\_en.pdf](http://www.aqsbw.de/pdf/ausw_berichte_v1_en.pdf)

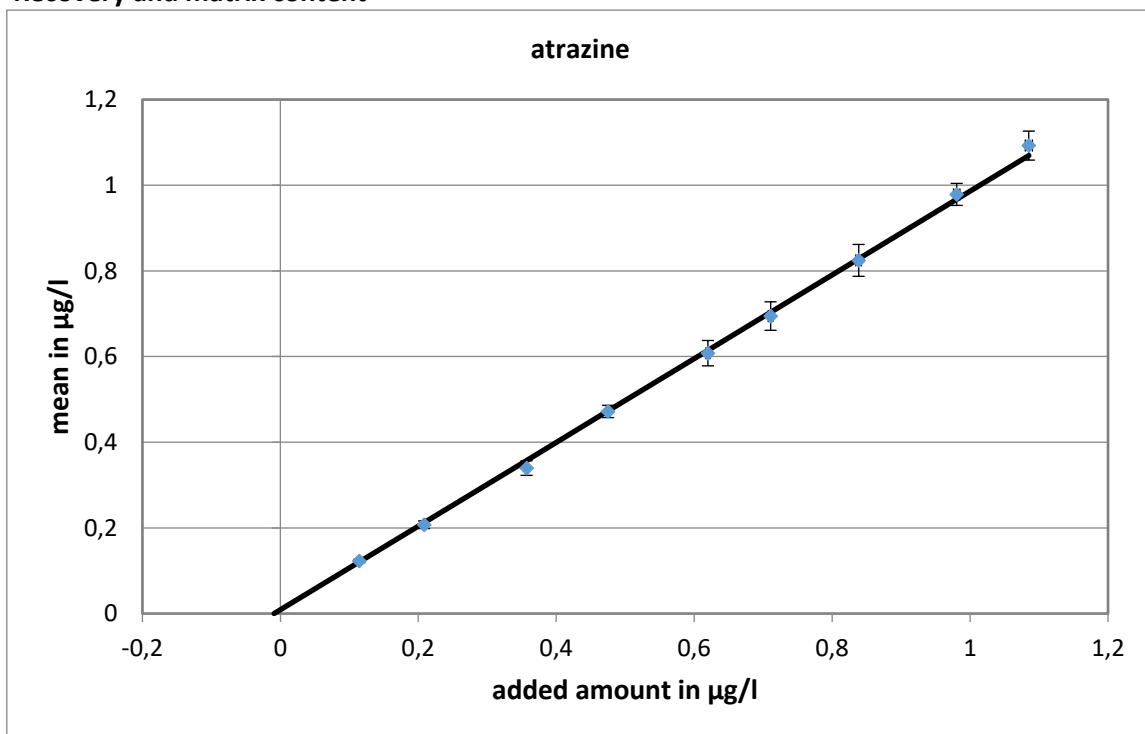

## **12. Internet**

The report is available on the following webpage: [www.aqsbw.de/pdf/281/report\\_281.pdf](http://www.aqsbw.de/pdf/281/report_281.pdf)

## Recovery and matrix content

slope of the regression: 0,976; recovery rate: 97,6 %

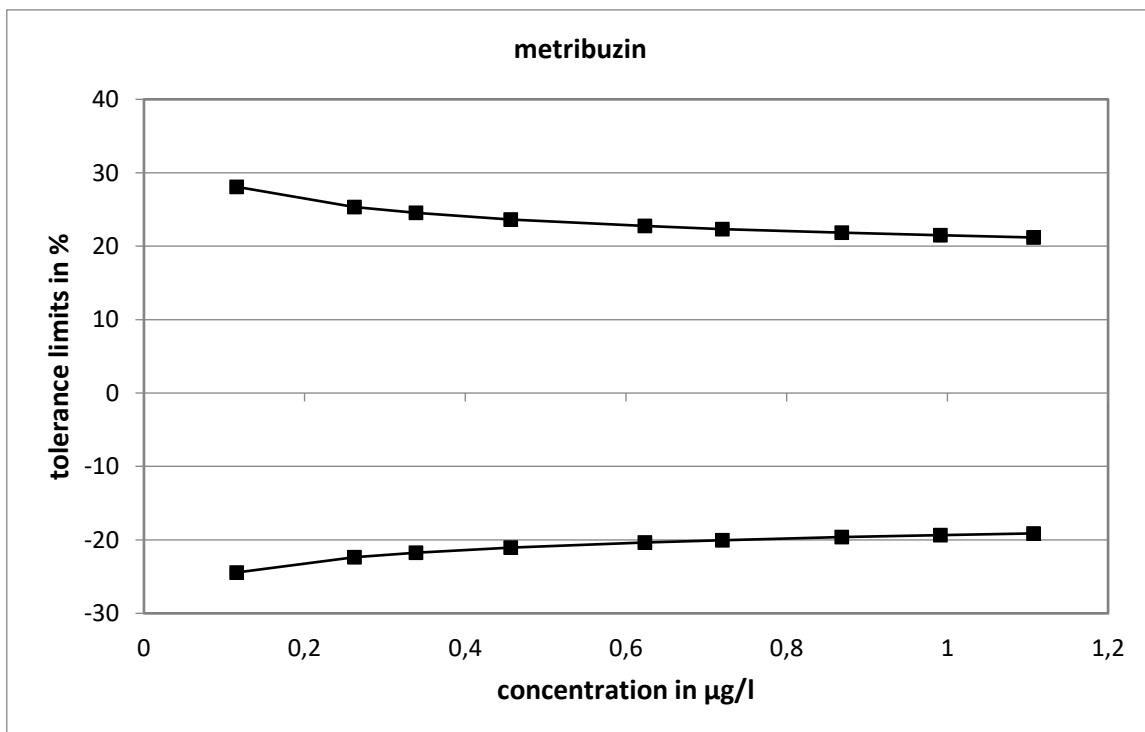

neg. x-axis intercept = matrix content: 0  $\mu\text{g/l}$

expanded uncertainty of the matrix content: 0,0055  $\mu\text{g/l}$  = 0 %

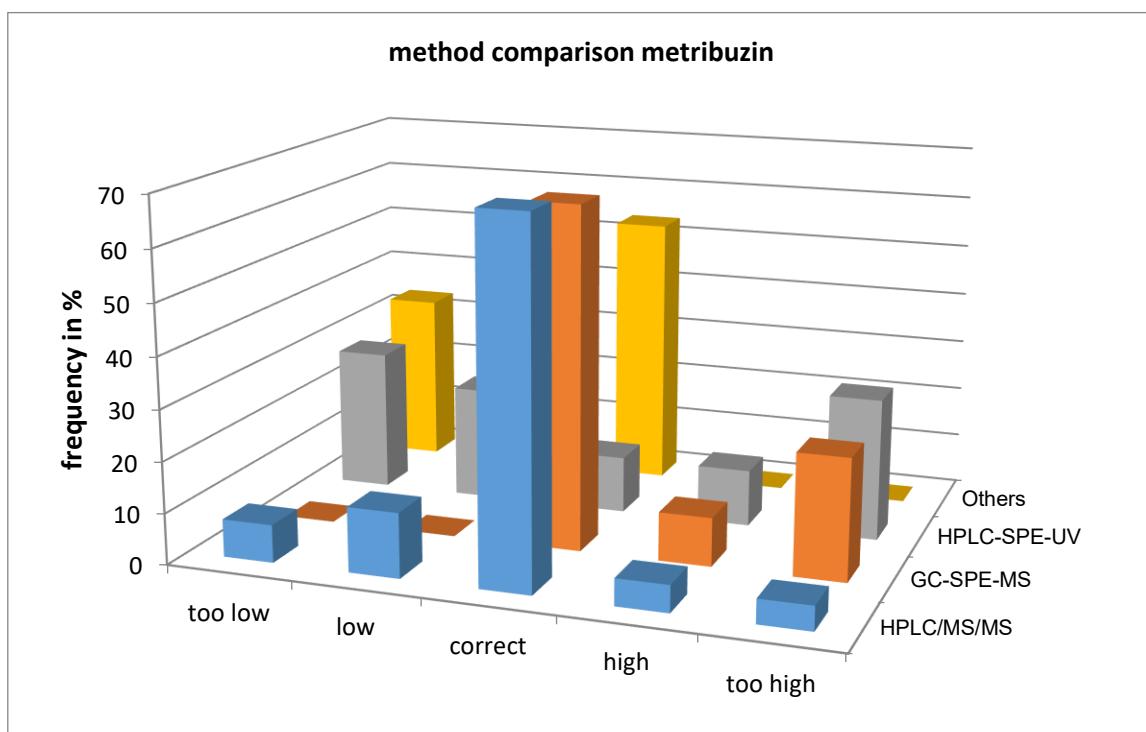

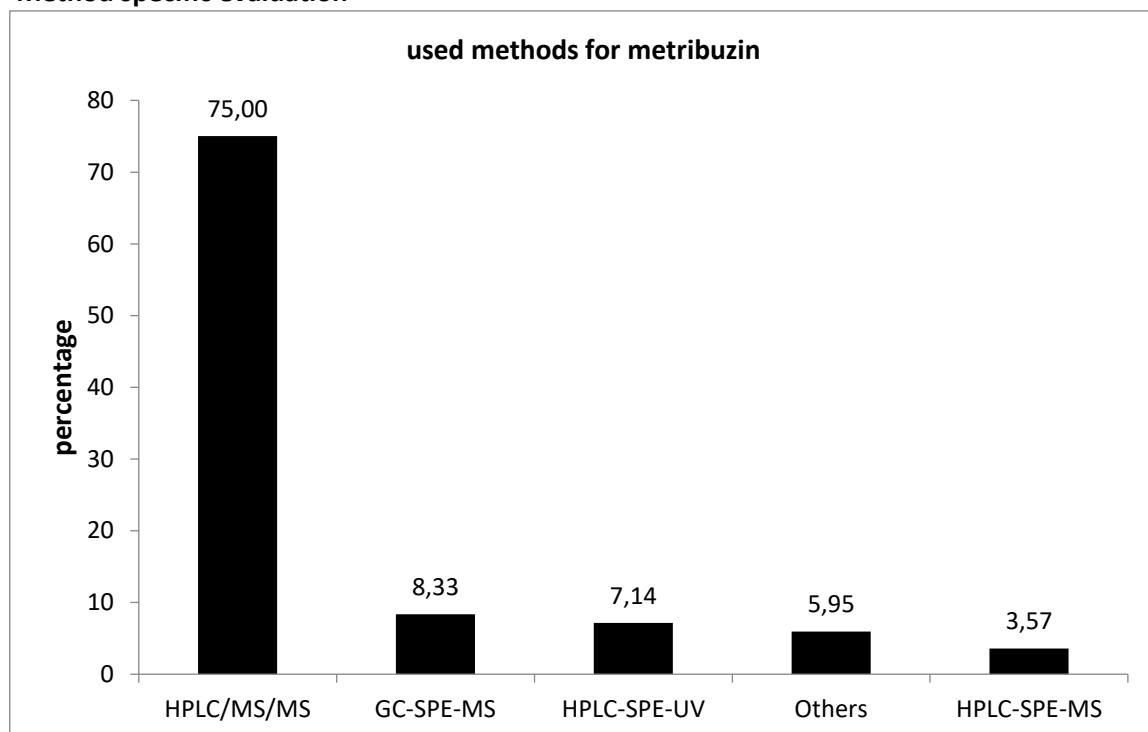

**Relative standard deviation and tolerance limits**

The relative standard deviations, calculated with the variance function, did not reach the limits.

### Method specific evaluation

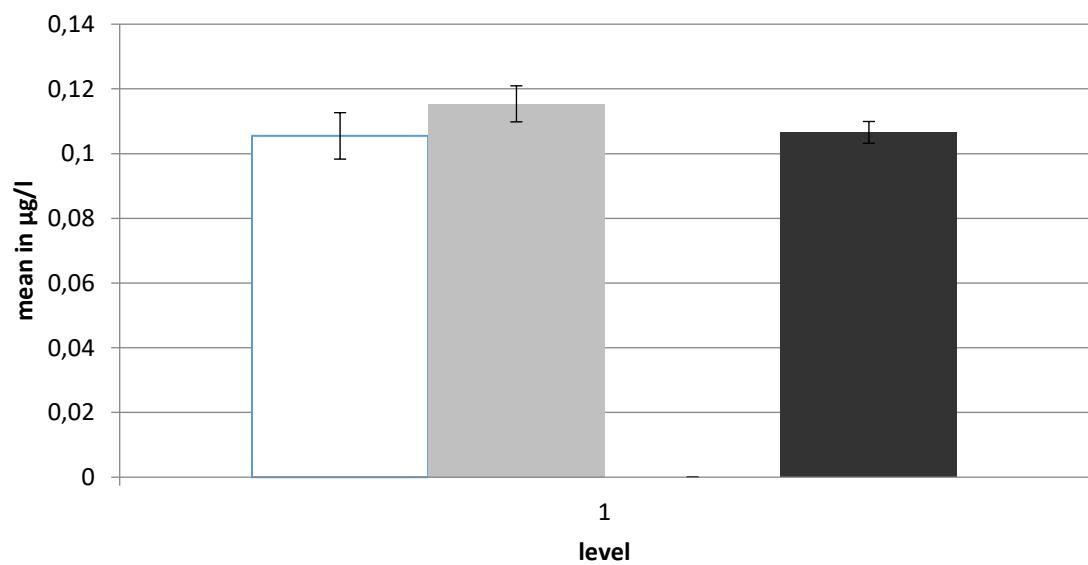

The values determined with HPLC/MS/MS showed the closest statistical distribution.

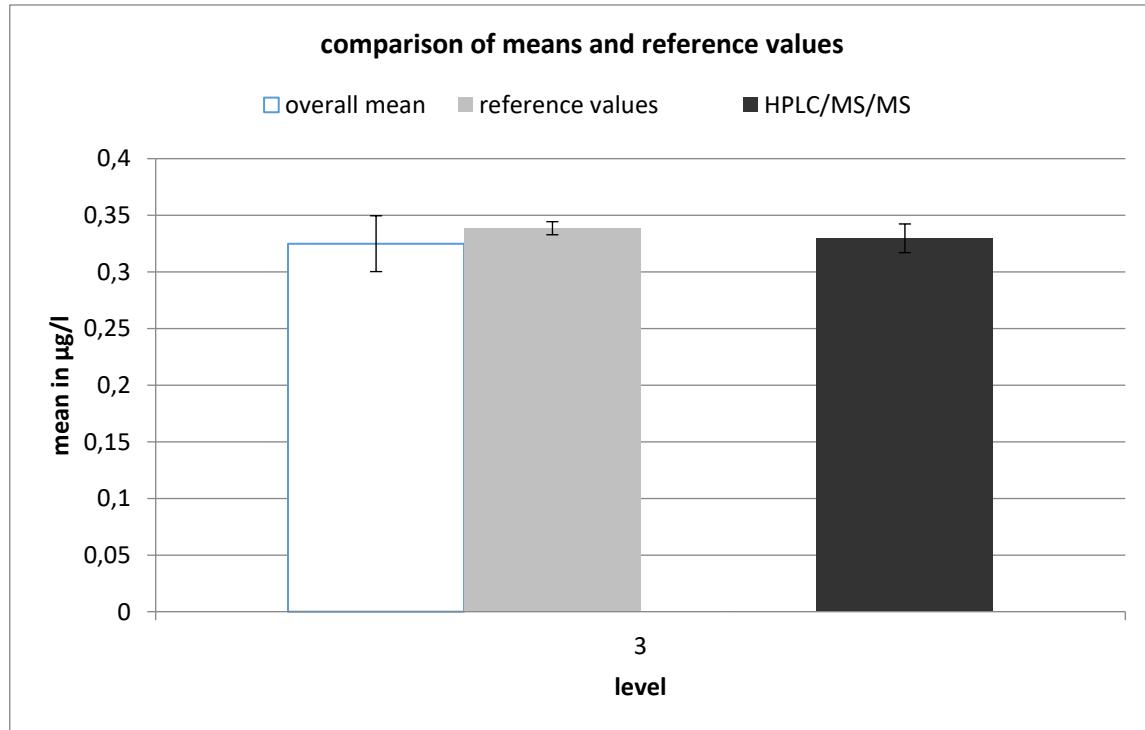

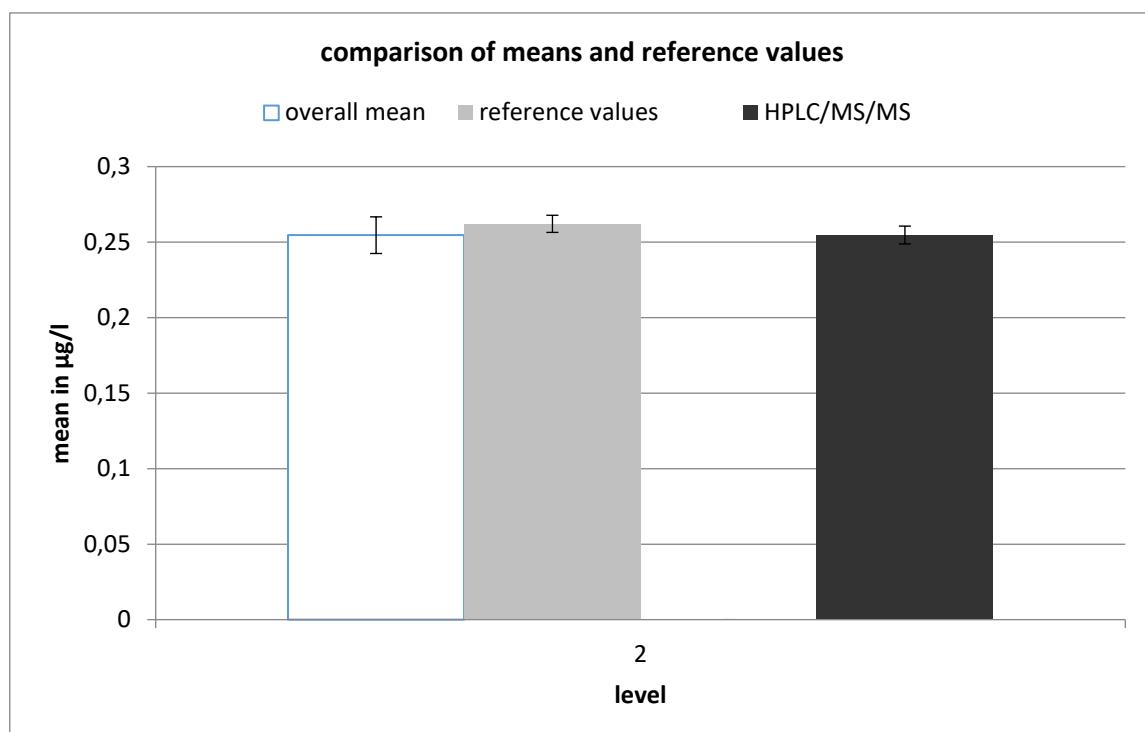

**Comparison of means and reference values**
