**Proficiency test 1/25
TW A5 – Other inorganic parameters in drinking water**

2024-12-02

Dear Madam or Sir,

in February 2025 the execution of the above mentioned proficiency test (PT) round "Other inorganic parameters in drinking water" is planned.

Details about the PT round are enclosed. Please read them with care.

The PT will be executed according to the recommendations of the German Federal Environment Agency from December 2003. These recommendations "for the execution of PTs for the measurement of chemical parameter and indicator parameter for the external quality control of drinking water laboratories" (Bundesgesundheitsblatt 46 (12), 1094-1095) require, that drinking water laboratories must demonstrate their competence for all parameters they are accredited for or they want to be accredited for by a successful participation in a PT round within a cycle of 2-3 years.

If you are interested in participation, please register online via our PT portal. You will reach this portal via our website <http://www.aqsbw.de/en>. For the first usage of the web portal, you must create a new user. If the e-mail address is not known to the system, this user must be verified. Please plan time for this registration process.

Application deadline: 06 January 2025

assist. PT coordinator

Annex:

Details of the proficiency test exercise

Details of the proficiency test round 1/25

TW A5 – Other inorganic parameters in drinking water – (February 2025)

- ammonium
- cyanide
- oxidisability
- TOC

Matrix

Drinking water

Dates and deadlines

Registration deadline: 06 January 2025

Please register for this PT only via our PT portal (accessible via our website).

You will receive a confirmation of receipt by e-mail and your registration is documented in our PT portal.

Dispatch of the samples: 03. February 2025

Deadline for submission of results 24. February 2025; 24:00h online via internet.

Results submitted after the deadline will not be accepted.

Sample dispatch

Samples will be sent by courier service.

Sample details

- 3 samples for the determination of ammonium in 250-ml-plastic bottles. Stabilisation by adding sulphuric acid.
- 3 samples for the determination of cyanide in 500-ml-glass bottles. Stabilisation by cooling and adding NaOH.
- 3 samples for the determination of oxidisability in 100-ml-plastic bottles. Stabilisation by adding sulphuric acid.
- 3 samples for the determination of TOC in 100-ml-plastic bottles. Stabilisation by adding hydrochloric acid.

Permitted analytical methods

Participants are free to choose a suitable method.

Limit of quantification

The laboratories have to ensure that they use methods with following limits of quantification:

parameter	limit of quantification
ammonium	0,025 mg/l
cyanide	0,0025 mg/l
oxidisability	0,5 mg/l O ₂
TOC	0,5 mg/l

Execution of the analysis

The samples must be analysed in the own laboratory with own personnel and own equipment. Subcontracting of the analysis is not allowed.

Evaluation and assessment of the single values

The statistical evaluation will be executed according to DIN 38402 – A45 or ISO/TS 20612 “Interlaboratory comparison for proficiency testing of analytical chemistry laboratories” with the combined estimator Hampel/Q-method, a method of robust statistics. The assigned value x_{pt} derived from the weighings of the spiked samples and the matrix content^{1,2} will be preferably used for the assessment of the single values. Only if this is not possible, the Hampel estimator as robust mean value of the participants’ data will be used.

If possible, the standard deviation for proficiency assessment σ_{pt} will be taken from the variance function for the calculation of the z_U -scores according to DIN 38402 - A45 (chapter 10.4) or ISO/TS 20612 respectively. σ_{pt} will be limited as follows:

parameter	lower limit	upper limit
ammonium	5%	25%
cyanide	5%	25%
oxidisability	5%	25%
TOC	5%	25%

A z-score for a result x is calculated for each measurement result derived from the assigned value x_{pt} and the standard deviation for proficiency assessment σ_{pt} :

$$z = \frac{x - x_{pt}}{\sigma_{pt}}$$

The z-score will be modified to a z_U -score with a correction factor for proficiency assessment (as described in the above mentioned standards).

The tolerance limits are defined as $|z_U|=2$.

The single results will be assessed as follows:

$ z_U \leq 2.0$	satisfactory
$2.0 < z_U < 3.0$	questionable
$ z_U \geq 3.0$	unsatisfactory

¹ Rienitz, O., Schiel, D., Güttler, B., Koch, M., Borchers, U.: A convenient and economic approach to achieve SI-traceable reference values to be used in drinking-water interlaboratory comparisons. *Accred Qual Assur* (2007) 12: 615-622.

² Koch, M., Baumeister, F.: Traceable reference values for routine drinking water proficiency testing: first experiences. *Accred Qual Assur* (2008) 13: 77-82.

Overall assessment

There is no overall assessment of the proficiency test round, but the single parameters are assessed.

A parameter is assessed as successful, if more than half of the values are assessed as "satisfactory".

In addition those values are assessed as "unsatisfactory":

- 1) that are not within the tolerance limit,
- 2) that are not determined (if the other samples of this parameters are analysed),
- 3) that are indicated with "lower than limit of quantification",
- 4) that have been subcontracted.

Participation fee

The participation fee will be 450 € plus transport costs.
